### Question 1

Build a python code, Assume u get temperature and humidity values (generated with a random function to a variable) and write a condition to detect an alarm in case of high temperature continuously

#### Program:

```
# import standard python modules.
```

```
import time
```

```
# import adafruit dht library.
```

```
import Adafruit_DHT
```

```
# import Adafruit IO REST client.
```

```
from Adafruit_IO import Client, Feed
```

```
# Delay in-between sensor readings, in seconds.
```

```
DHT_READ_TIMEOUT = 5
```

```
# Pin connected to DHT22 data pin
```

```
DHT_DATA_PIN = 26
```

```
# Set to your Adafruit IO key.
```

```
# Remember, your key is a secret,
```

```
# so make sure not to publish it when you publish this code!
```

```
